Betent No. 5856091

GENERAL INFORMATION:

APPLICANT: Brichard, Vincent; Van Pel, Aline;

APPLICANT: Traversari, Catia; W 1fel, Thomas; Coulie, Pierre;

APPLICANT: Boon-Falleur, Thierry; De Plaen, Etienne.

TITLE OF INVENTION: ISOLATED NUCLEIC ACID SEQUENCE CODING FOR A

TITLE OF INVENTION: TUMOR REJECTION ANTIGEN PERCURSOR PROCESSED TO AT LEAST ONE T

TITLE OF INVENTION: REJECTION ANTIGEN PRESENTED BY HLA-A2

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ·,
                                                                                                                                                                                                                                                                                                                                                                                                                                                        This cDNA sequence codes for human DNAX Vic-1 (DVic-1) (see AAW60649), a novel C-C chemokine. DVic-1 cDNA can be obtained from e.g. skin, epithelial or wound healing libraries by PCR amplification or by hybridisation. 2 ESTS (see AAV38292-33) were obtained from a human foetal heart library and a human osteoblast library. These show homology and are probably ESTS from a similar transcript. The chemokine motifs of these 2 ESTS were compared, and a consensus sequence was derived and confirmed as encoding DVic-1. The DVic-1 gene has been localised to human chromosome 9p13. An alternative longer transcript (see AAV38296) for human DVIC-1 is also disclosed. Also claimed is novel human DNAX Groin Wound expressed CC chemokine (DGWCC) (see AAW60649), as well as expression vectors and host cells. DVIC-1 and DGWCC play a role in the requiation or development of the contract of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    tcatccttcatgtcaagcgcagaagaatctgtgtcagccgcacaaccatactgttaagc 392

They can be used in the treatment of conditions associated with abnormal physiology or development, including abnormal proliferation, e.g. cancerous conditions or degenerative conditions. Abnormal proliferation, regeneration, and atrophy may be modulated by appropriate therapeutic treatment using products of the invention. The products can also be used for detection, diagnosis and drug

Modulating cell movement within the skin, useful for treating immunological skin conditions or diseases comprises administering T cell-attracting chemokine or vasoactive intestinal contractor chemokine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Morales JM;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Modulating movement of a cell within or to the skin of a mammal can be achieved by administering an antagonist or agonist of cutaneous T cell-attracting chemokine (CTACK) or vasoactive intestinal contractor (Vic) chemokine. The antagonist is selected from a mutein of natural CTACK or Vic, an antibody which neutralises CTACK or Vic or an antibody which neutralises CTACK or Vic an antibody can block GPR2 ligand binding. The CTACK or Vic agonists or antagonists are useful for treating medical conditions or diseases associated with immunological conditions of the skin.
                                                                                                                                                                                                                                                                                                                                                                Cutaneous T-cell attracting chemokine; CTACK; skin; cell movemen! migration; vasoactive intestinal contractor; Vic; GPR2; agonist; antibody; immunological condition; mutein; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Length 731;

designated GPR27. GPR27 has antimidrobially analgesic, cytostatic, antidiabetic, ancectic, antiasthmatic, antiparkinsonian, cardiant, hypotensiave, diuretic, osteopathic, cerebroprotective, antidiabetic, antidiabetic, antidepressant, antidepressant, neuroleptic, nootropic and anticonvulsant activities, and can be used in producing vaccines and in gene therapy. The GPR27 protein and polynucleotide are useful for treating certain diseases or as vaccines against these diseases. These diseases include bacterial, fungal, proteins these diseases. These diseases include bacterial, fungal, proteozoan or viral (e.g. infections caused by HIV-1 or HIV-2) infections, pain, cancers, diabetes, obesity, anorexia, bulinia, asthma, parkinson's disease, acute heart failure, hypotension, hypertension, urinary cretention, osteoprorsis, angina pectoris, myocardial infarction, stroke, ulcers, allergies, benign prostatic hypertrophy, migraine, vomiting, psychotic and neurological disorders (e.g. anxiety, schizophrenia, manic depression, depression, delirium, dementia or mental retardation), or dyskinesias (e.g. Huntington's disease or Gilles de la Tourette's syndrome). The polynuchectide may also be used for chromosome
                                                           polynucleotides,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              212
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       129
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     272
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        332

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cancer-associated nucleic acid molecules (N) and proteins (P), where cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens. The colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. Nand P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P carperession. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Chaditionally, N may be used to produce the colon cancer associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and ABB7789 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Nucleic acids encoding 4277 human colon cancer-associated polypeptides, useful for preventing, diagnosing and/or treating colorectal cancers -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1471 agttgataccattgtgccattcctcttttggcctcttttttgtccatagaggcttcaaga 1530

AAM199166 to AAH99904 encode the human proteins given in AAM2525 to
AAM25963. The proteins can have activities based on the tissues and
cells they are expressed in, such as: antihilammatory; antiheumatic;
antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant;
cardiovascular; antianaemic; antiangeregant; heamostatic; vulnerary;
cardiovascular; antianaemic; antiangeregant; heamostatic; vulnerary;
antidiabetic; coteopathic; dermatological; antiallergic; antiasthmatic;
antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic;
cantidabetic; cytostatic; neuroprotective; antidepressant; nootropic;
antidabetic; cytostatic; neuroprotective; antidepressant; nootropic;
antidatostics antidepressant; nootropic;
antidatostics associated with the activity of a protein e.g. inflammation, neuropathology, cardiac anaphylaxis; viral, bacterial, HIV and fungal
infections, autoimmunity, genetic diseases, haematopoietic disorders,
costeoporosis, severe combined immunodeficiency, eczema, allergic
criminits, asthma, diabetes, cancer, multiple sclerosis, depression,
antiditics, asthma, diabetes, cancer, multiple sclerosis, depression,
            polypeptides, useful for
ulcers and HIV infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 698 BP; 172 A; 170 C; 188 G; 168 T; 0 other;

human secreted proteins, and encode the proteins given in AAY153 to human secreted proteins, and encode the proteins given in AAY153 to AAY1679, respectively. The proteins given the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proteins obtained may have cytokine activity, cell proliferation/differentiation activity, haematopoiesis regulating activity, thassue growth regulating activity, reproductive hormone regulating activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, tumour inhibition activity or other activitys. The products activity in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for sequences.
                                                                                                                                                                      forensic; gene therapy; chromosome mapping; signal peptide; upstream regulatory sequence; cytokine activity; cell proliferation; differentiation; haematopolesis regulation; tissue growth regulation; reproductive hormone regulation; chemoclactic; chemokinetic; haemostatic; thrombolytic; anti-inflammatory; tumour inhibition; ds.

homology with hTECK (20% identity). GFRP-2 and hTECK are both basic proteins, having isoelectric points of 10.1 and 10.2, respectively. GFRP-2 was found by Northbarn analysis to be expressed in both tumorous and nontumorous breast tissue. GFRP proteins (AAB03000-B03003), nucleotides encoding them (AAA52455-A52458), GFRP agonists and antagonists may be used to treat a wide variety of diseases associated with increased or decreased expression or activity of GFRP proteins. Conditions which may be treated include developmental disorders, cell proliferative disorders (e.g., cancers), immune disorders (e.g., allergies, asthma), reproductive disorders (e.g., manstrual cycle disorders) cardiovascular disorders (e.g., arteriosclerosis) and bacterial, viral, fungal or parasitic infections. Additionally, GFRP proteins and nucleotides can be used in the diagnosis of such disorders.

                                      The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations cresponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and conditional partners are useful human the sequence data for this patent did not appear in the printed sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ;

The invention provides an isolated human chemokine, which is preferentially expressed in breast tissue or detected in breast milk. An antibody that recognizes the novel chemokine, or a chemokine-derived antibonic peptide, can be used to treat breast disease in a patient. A peptide, which binds to a cellular receptor for the chemokine, can also be used to treat breast disease. Antiponic peptides of the chemokine can be used to vaccinate patients against breast disease. The chemokine can be used to vaccinate patients against breast disease. The chemokine polynucleotide sequences and the chemokine protein can be detected in samples with primers, probes and antibodies using standard techniques. This is useful for detecting breast disease. Other breast diseases that may be treated or detected with the chemokine and its encoding cystitis, and benign hyperplasias as well as other malignancies. The present sequence represents the nucleotide sequence of the human mammary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A mammary associated chemokine and related polynucleotides, useful for detection and treatment of breast disease, especially cancer

The invention provides an isolated human chemokine, which is preferentially expressed in breast tissue or detected in breast milk. An antigody that recognizes the novel chemokine, or a chemokine-derived antigonic peptide, can be used to treat breast disease in a patient. A peptide, which binds to a cellular receptor for the chemokine, can also be used to treat breast disease. Antigonic peptides of the chemokine can be used to vaccinate patients against breast disease. The chemokine can samples with primers, probes and antibodies using standard techniques. This is useful for detecting breast disease. Other breast diseases that may be treated or detected with the chemokine and its encoding polynucleotides include inflammations, infections, mastitis, benign population hyperplasias as well as other malignancies. The present sequence represents the human mammary associated chemokine present sequence.

The invention provides an isolated human chemokine, which is preferentially expressed in breast tissue or detected in breast milk. An antibody that recognizes the novel chemokine, or a chemokine-derived antigenic peptide, can be used to treat breast disease in a patient. A peptide, which binds to a callular receptor for the chemokine, can also be used to treat breast disease. Antigenic peptides of the chemokine can be used to vaccinate patients against breast disease. The chemokine polynucleotide sequences and the chemokine protein can be detected in samples with primers, probes and antibodies using standard techniques. This is useful for detecting breast disease. Other breast diseases that may be treated or detected with the chemokine and its encoding polynucleotides include inflammations, infections, mastitis, benign cystitis, and benign hyperplasias as well as other malignancies. The present sequence represents an antisense riboprobe that hybridises to

The RinTinTin polynuclectide is useful as a diagnostic reagent through detecting mutations in the associated gene. The polynuclectide and polypeptide are useful for screening agonists and antagonists of RinTinTin and are also useful as vaccines in treating various diseases such as allergies, asthma, atheroscierosis, autoimmune disease, cancer, osteoarbhritis, various infections, psoriasis, rheumatoid arthritis, and vascular disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Db
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.

The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. Absolug- and products dependent on DNA and amino acid sequences. Absolug- and products dependent on DNA and amino acid sequences. Absolug- and products dependent on DNA and and and an and approach and

This sequence represents a breast specific gene (BSG) clone. The BSG sequences are also referred to as breast specific markers (BSM). The invention relates to methods for diagnosing, monitoring, staging, imaging and treating breast cancer (BC). The methods comprise measuring the lavels of BSG products in cells, tissues or body fluids of the patient and comparing the measured levels of BSG, with BSG levels of a normal human control. An antibody against the BSG sequences can be labelled and used for imaging BC in a patient. The antibody can be conjugated to a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Detecting, diagnosing, monitoring, staging, prognosticating, imaging and treating breast cancer using protein product of breast specific genes -

human secreted proteins, and encode the proteins given in AAY12681 to human secreted proteins, and encode the proteins given in AAY12681 to AAY12913, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiation activity, heamostation activity, heamostatic activity, heamostatic activity, heamostatic activity, anti-inflammatory activity, tumour inhibition activity or other activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a
                                                                                                                                                         forensic; gene therapy; chromosome mapping; signal peptide; upstream regulatory sequence; cytckine activity; cell proliferation; differentiation; hacmatopoiesis regulation; tissue growth regulation; reproductive hormone regulation; chemotactic; chemokinetic; haemostatic; thrombolytic; anti-inflammatory; tumour inhibition; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       polypeptide into a membrane, or importing a polypeptide into a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New nucleic acids encoding human secreted proteins - obtained from cDNA libraries derived from testis, ovary, uterus and spleen tissue
                                                                                                                                          Human; secreted protein; EST; expressed sequence tag; diagnosis;

/note=="Organ: kidney; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Plasmid DNA from the normalized library NCI_GGAP_Kid3 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 132376-1323911, 1456007-1456775, and 1500552-1502855). Subtraction by Bento Soares and M. Falima Bonaldo.

Double-stranded cDNA was prepared from cell line RNA. 5'
and 3' adaptors were used in cloning as follows: 5'
adaptor sequence: 5'-CACGGCCATTATGGCC-3' and 3' adaptor
sequence: 5'-ATTCTAGAGGCGAGGCGGCGCGCATG-T(3)BN-3'
(where B = A, C, or G and N = A, C, G, or T). Average
insert size 1.75 kb (range 0.94.0 kb). 15/15 colonies
contained inserts by PCR. This library was enriched for
full-length clones and was constructed by Clontech
Laboratories (Palo Alto, CA). Note: this is a NIH_MGC

                                                                                                                                                 ò
                                                                                                                                                                                                                              The invention provides an isolated human chemokine, which is preferentially expressed in breast tissue or detected in breast milk. An antibody that recognizes the novel chemokine, or a chemokine-derived antibodive that recognizes the novel chemokine, or a chemokine-derived antibodic peptide, can be used to treat breast disease in a patient. A peptide, which binds to a cellular receptor for the chemokine, can also be used to treat breast disease. Antiponic peptides of the chemokine can be used to vaccinate patients against breast disease. The chemokine polynucleotide sequences and the chemokine protein can be detected in samples with primers, probes and antibodies using standard techniques. This is useful for detecting breast disease. Other breast diseases that may be treated or detected with the chemokine and its encoding cystitis, and benign hyperplasias as well as other mailgnancies. The present sequence represents the nucleotide sequence of the human mammary

                                                                                                                                                                                                                                                        AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, and angains and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps. by inscribing the nucleic acids into a host cell and culturing the cell of express the proteins. N and P can be used in the prevention, diagnosis and AAR77789 represent sequences used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAM199166 to AAM199904 encode the human proteins given in AAM25255 to AAM35963. The proteins can have activities based on the tissues and cells they are expressed in, such as: antiinflammatory; antirheumatic; antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; central nervous system, virucide; anti-HIV; fungicide; antimutagen;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isolated human polynucleotides encoding polypeptides, useful for treatment and diagnosis of e.g. cancer, ulcers and HIV infection % \left( 1\right) =\left\{ 1\right\} =
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human protein encoding cDNA sequence SEQ ID NO:255.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RT;                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Drmanac
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      neurological disorder; ss.

cardiovascular; antianaemic; antiaggregant; haemostatic; vulnerary; antidabetic; cytostatic; dermatological; antiallergic; antiasthmatic; antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; cartiparkinsonian; and immunostimulant. The proteins and polynucleotides encoding them can be used in gene therapy, antisense therapy and vaccine production, The proteins and polynucleotides are useful for screening for agonists or antagonists of a protein and for the treatment and diagnosis of disorders associated with the activity of a protein e.g. inflammation, rheumactol arthritis, septic shock, pancreatitis, cardiac dysfunction, renuropathology, cardiac anaphylaxis, viral, bacterial, HIV and fungal infections, autoimmunity, agenetic diseases, haematopoietic disorders, anaemia, platelet disorders, thrombocytopaenia, wounds, burns, ulcers, osteoporosis, severe combined immunodefliciency, eczema, allergic hintits, asthma, diabetes, cancer, multiple sclerosis, depression, allergine, and participal and antipal sclerosis, depression, allergine, and participal and antipal sclerosis, depression, allergine, and antipal sclerosis, depression, and antipal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                443

                                          Modulating movement of a cell within or to the skin of a mammal can be achieved by administering an antegonist or agonist of cutaneous T cell-attracting chemokine (CTACK) or vasoactive intestinal contractor (Vic) chemokine. The antegonist is selected from a mutein of natural CTACK or Vic, an antibody which neutralises CTACK or Vic or an antibody which plock GPR2 ligand binding. The CTACK or Vic agonists or antagonists are useful for treating medical conditions or diseases associated with immunological conditions of the skin.
                                                                                                                                                                                                                                                                                                         agagagactcgccatcgtggccttggctgtctgtgcggccctacatgcctcagaagcca 122

GPR27 has antiminationolial, analgesic, cytostatic, antidiabetic, antidepressant, antidiabetic, antidepressant, antidepressant, antidepressant, antidepressant, antidepressant, antidepressant, and producing vaccines and in gene therapy. The GPR27 protein and polynucleotide are useful for treating certain diseases or as vaccines of an antidepressant in gene therapy. The GPR27 protein and polynucleotide are useful for treating certain diseases or as vaccines against these diseases include bacterial, fungal, protozoan or viral (e.g. infections caused by HIV-1 or HIV-2) infections, pain, cancers, diabetes, obesity, anoreals, bulinia, asthma, Parkinson's cisease, acute heart failure, hypotension, hypertension, urinary retention, osteoporosis, angina pectoris, myocardial infarction, stroke, ulcers, allergies, benign prostatic hypertrophy, migraine, vomitting, psychotic and neurological disorders (e.g. anxiety, schizophrenia, manic depression, delirium, dementia or mental retardation), or dyskinesias (e.g. Huntington's disease or or mental retardation), or consideration and procession or mental retardation, or consideration and procession or mental retardation, or consideration or mental retardation, or consideration or conside

consensus derived from several overlapping and/or extended cDNA clones. GFRP-2 is probably a CC chemokine and has chemical and structural homology with hTECK (20% identity). GFRP-2 and hTECK are both basic proteins, having isoelectric points of 10.1 and hTECK are both basic and nontumorous breast tissue. GFRP proteins (AAB3000-B0303), nuclectides encoding them (AAA52455-A5248), GFRP agonists and antagonists may be used to treat a wide variety of diseases associated with increased or decreased expression or activity of GFRP proteins. Conditions which may be treated include developmental disorders, cell proliferative disorders (e.g., cancers), immune disorders (e.g., allergies, asthma), reproductive disorders (e.g., menstrual cycle disorders) cardiovascular disorders (e.g., arteriosclarosis) and bacterial, viral, fungal or parastic infections. Additionally, GFRP proteins and nucleotides can be used in the diagnosis of such disorders.
                                                                                                                                                                                                                                                                                                                                        ä;
                                                                                                                                                                                                                                                                                                                                                                                                                                300

polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, and gene mapping, and in recombinant production of (II). The polymoclecitides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polypucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       and to produce other types of data and products dependent on DNA and amino acid sequences. AAS04197-AAS04564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        gotcot-ggaaagagtgaatatgtgtcgcatccagagagagtgatggggattgtgactt-g 325

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes. Dolypeptide (II) sequences. (I) is useful as hybridisation probes. polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in regions in the professor for other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human

                                                                                                                           human secreted proteins, and encode the proteins given in AAY1531 to human secreted proteins, and encode the proteins given in AAY11533 to human secreted proteins, and encode the proteins given in AAY11533 to AAY11679, respectively. The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for disponsis and therapy. The proteins obtained may have cytokine activity, call proteins obtained may have cytokine activity, call proliferation/differentiation activity, haematopoiesis regulating activity, tissue growth regulating activity, reproductive hormone regulating activity, receptor/ ligand activity, anti-inflammatory activity, tumour inhibition activity or other activities. The products can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a cell.
                                                                                                                                                                                                                                                                                                                                                                                        ô

An antibody that recognizes the novel chemokine, or a chemokine-derived antigenic peptide, can be used to treat breast disease in a patient. A peptide, which binds to a cellular receptor for the chemokine, can be used to treat breast disease. Antigenic peptides of the chemokine can bolynucleotide sequences and the chemokine projectide sequences and the chemokine protectine such primers, probes and antibodies using standard techniques. This is useful for detecting breast disease. Other breast diseases that may be treated or detected with the chemokine and its encoding polynucleotides include inflammations, infections, mastitis, benign cystitis, and benign hyperplasias as well as other malignancies. The present sequence represents the human mammary associated chemokine
